

# DS-4000

## Main Features:

- **You can dictate faster than on cassette devices:** Dictate on one reusable media card up to 22 hours. Dictated jobs are individually defined by user, time, date and work type.
- **Scalability:** No firm is too large or too small for this equipment.
- **Digital equipment works similarly to the cassette devices:** Same slide switch with little or no learning curve on how to use.
- **E-mail dictation into the office:** Yes, you can e-mail your voice file into the office from anywhere; it also can be sent across your server.
- **Manage work flow:** You and your administrator can glance at the work flow from your PC to see what has and has not been completed.
- **Personal profiling:** Your name stays right with the dictation; time date and additional comments can also be seen.
- **More cost effective than cassette equipment:** The average dictation and transcription system is less expensive than you'd expect.
- **Voice file back up:** Voice files back up just like all of your other files on your server.
- **Communication with the transcriber:** You and your assistant can communicate regarding deadlines or any relevant information by sharing comments about the dictation right on the screen.
- **Insert and delete:** You can easily insert or delete words, etc.
